

Ultraviolet Light Volume
Distribution Measurement Film

UV Scale
Type I

Innovative light volume distribution visualization film that enables you to easily determine the ultraviolet light volume distribution by checking the change in color

This film reacts to ultraviolet light and changes color density according to the volume of light. This film can be used for a variety of applications where ultraviolet light is used.

Attachment of LCD panels

Exposure of resists

Adhesion of
hard disk function resin

Sterilization of
food packaging

Hardening of
adhesives (spot)

Exposure of resists
(direct drawing)

Hardening of
UV printing inks

Hardening of
adhesives
